With a ground plan measuring 38 × 120 m, the warehousing hall was built on a vacant lot between two existing buildings, which were already planned for expansion; the state of preparation for columns attested to this. This hall has two bays, and the load-bearing construction includes columns, roof girders, trusses, perimeter support beams, foundation walls and sill panels. While the project was being realized, it was necessary to take down part of the original construction in order for trucks to be allowed through passage. Coordinating all elements and installation mechanisms, including the existing work space, brought with it extremely strict and specific conditions for maintaining discipline regarding safety and transportation. The second building to be installed was the multifunctio...
