Apartment Building Oáza Michle

Location
Prague

Investor
SOGEPROM Michle s.r.o.

Construction period
01/2010 – 06/2011

Type of construction
Residential, Development

Scope of services
Construction & Property Development

The building is situated on a longitudinal plot of land between the Botič stream and a parallel road. It comprises two underground floors with parking spaces and six automatic car stacker systems as well six floors of apartments. There are a total of 60 apartments ranging in layout from one-room apartments to two-level apartments with four rooms. The apartment building uses a pile foundation system with increased slab thickness around pile heads. The load-bearing system of the building

consists of cast-in-place concrete walls, columns and floor slabs. Exterior and interior brickwork was made of POROTHERM blocks. The building envelope is composed of a contact thermal insulation system. The project also involved utility relocation and connection of utilities to the building. In addition,...
