Shared **innovation**

The National Institute of Cardiovascular Diseases is the only specialized medical facility in Slovakia that provides comprehensive care in the field of cardiovascular medicine to patients from all age groups. Thanks to the investment that was made, the Pediatric Cardiology Center was relocated from premises which had, until that time, been rented from the Pediatric Teaching Hospital. Along with the Diagnostic Center, it has acquired modern premises equipped with the latest technologies that meet the highest international standards. In the Pediatric Cardiology Center, there are two cardiac operating rooms, one hybrid catheterization laboratory, 60 in-patient hospital beds, and hotel accommodation for the parents of juvenile patients with a capacity of 18 beds. As part of the Diagnostic C...
