Faculty of Informatics & Management – University of Hradec Králové

Location
Hradec Králové

Investor
Univerzita Hradec Králové

Construction period
04/2006 – 06/2008

Type of construction
Education

Scope of services
Construction

“ The faculty building was inspired by buildings designed by the renowned

architect Gočár in the pre-war era. ”

The four-storey structure has a rectangular floor plan with an atrium in the middle. The load-bearing system consists of a smooth steel-concrete skeleton with a module network of piles. The peripheral jacket is built as a suspended facade made by traditional brick technology. T

he atrium solves in an elegant way the illumination of the internal part, as well as aeration of the adjoining premises. A foot-bridge featuring a recognised steel load-bearing structure and a glazed floor inside the atrium serves as an additional rest area. Separate floors are connected by staircases, lifts, two fire stairs and a cargo lift.

The building houses dean’s offices and individual departments, classrooms, an aula, computer labs and technical base of the building. The entire complex is barrier free.
