capacity of 36,000 PE, as was the WWTP in Čáslav, with a capacity of 15,000 PE; as well, sewers were completed in Kutná Hora, Uhlířské Janovice, Zruč nad Sázavou and Sázava. A total of 11,791 metres of gravity sewers were laid, along with 2,663 metres of pressure pipes, and 3 chambers for separation of rain water were renovated. 24,600 m² of asphalt surfaces were repaired, along with 2,042 m² of paving tiles, 451 m² of concrete panel roads and 1,276 m² of grassed areas. 298 metres of water mains were relocated and networks were provided for gas lines, LV cables, communication cables and street lighting. A capacity increase was implemented at t...
