Investor

**Hospital in Svitavy**

Construction period

**10/2001 – 01/2005**

Type of construction

**Health care**

Scope of services

**Construction**

The acute medicine building in the Hospital in Svitavy includes basic operations and complementary services; primarily operating rooms and central sterilization, intensive care units, anesthesiology and resuscitation department, casualty wards, and treatment rooms, clinical biology ward – labs. Last but not least, the main hall of the building also serves as an entrance area for the entire hospital. On all floors, the building is connected with inpatient wards and with the emergency unit. The hospital complex is rather cramped and the building is therefore
