## “ New building of central emergency department with intensive care unit. ”

The building has three above-ground floors and one underground floor with a total usable area of 6,182 m<sup>2</sup>. It is located near an existing hospital building housing surgical departments and operating rooms and has a direct barrier-free connection to these facilities.

On the underground floor of the new building, there are technical and plant rooms, locker rooms and sanitary facilities for the staff. The central emergency department with specialized examination rooms is located on the ground floor. On the second floor and third floor, there is the intensive care department, which has a total capacity of 24 hospital beds.
