

Long-term Care Hospital in Moravská Třebová

“ Construction of state-of-the-art long-term care hospital and emergency medical service station. ”

Construction of a new three-storey hospital building with a total usable floor area of 5 913 m².

In addition to constructing a long-term care facility with 90 hospital beds, the project includes food service facilities, physiotherapy department, laboratories, an office/operations part and an emergency medical service station (ambulance station) with parking facilities for ambulances.

Moreover, the building is equipped with a medical gas supply system, floor finishes have an antimicrobial protection, and suspended ceilings (including integrated lighting) have a special surface treatment to enable cleaning with water.

The execution works also include paved areas outside the hospital for vehicle parking, sidewalks and an access road. Finally, the scope of works on the proje...
