Shared **innovation**

The office building is located in a newly created Prague district – CITY WEST. Six aboveground floors offer 17,000 m² of office space, the seventh floor is designed to house mechanical equipment and four underground floors have 5,700 m² of parking space and a car wash. The building is rectangular in plan with three wings forming an H-shape, which creates semi-enclosed green atria providing natural light for maximum office space. A foundation slab 700 mm thick constitutes the foundations of the building and its structural system features a cast-in-place reinforced concrete skeletal frame complemented with POROTHERM masonry. The building envelope is a combination of a glass façade and ETICS, the eastern and western sides of the façade are cladded with DEKLAMELA façade system. Window...
