Construction & Property Development

“ Pražská project involved construction of four apartment houses with 301 flats. ”

B4 and B3 buildings feature six above-ground and one underground storey, B2 and B1 houses have 7 above-ground and one underground

storey. The basement structures of the buildings comprise monolithic steel-concrete slabs laid on drilled piles. Vertical supporting structures of the apartment houses combine steel-concrete monolithic skeleton and a wall system made of Porotherm brick blocks. The ceiling structures consist of monolithic steel-concrete plates. The roofs of the apartment houses are flat and on the highest floor level they are used as a terrace. The peripheral jacketing forms a contact insulation system. The separate apartment houses are distinguished by the colour of balcony structures consisting of high-pressure laminate plates – each building features another colour – re...
