

Refurbishment and extension of Solnice Community Center

“ Refurbishment and extension of a community center built in 1970s. ”

Thanks to a complete refurbishment of the building, it was possible to eliminate construction defects as well as to develop a project that is in line with the current standards. By extending the original building, the community center increased its floor area with additional 700 m², featuring a multi-purpose hall with a new layout offering a seating capacity of 500 seats, a restaurant and space for leisure activities. The refurbishment project involved demolition works, pile foundations for new structures, supporting of existing structures with micropiles, new load-bearing walls and slabs, new roofing and roof cladding, flooring, windows and doors, suspended (plasterboard and acoustic) ceilings, ventilated façade. The scope of works also included installation of plumbing, HVAC, all ...
