Lanškroun

Investor

**Municipality of
Lanškroun**

Construction period

09/2004 – 12/2006

Type of construction

Health care

Scope of services

Construction

The new Retirement Home comprises two irregular segments shaped like a hockey stick. Both parts of the building have four above-ground storeys and one storey which is partially embedded in the ground. The building is based on a steel-concrete plate. The construction system is formed partially by a steel-concrete monolithic skeleton with brickwork, and partially by brickwork and panel ceilings. The roof structure features wooden trusses with roofing of PVC tiles. The facade is made of silicate
