Municipality of Rychnov nad Kněžnou

Construction period

07/2008 – 06/2010

Type of construction

Leisure

Scope of services

Construction

The construction of the new centre was preceded by a demolition of the old building. The centre's combined construction system comprises a supporting steel-concrete, monolithic, steel and brick structures, and the built-up area covers about 13,300 m³. The steel structure is covered with a special paint suitable for the aggressive pool environment, while

the monolithic steel-concrete structure is made of face concrete. The walls are treated with special vapour-tight paint. The hall's lower ceiling is made of acoustic mineral panels and its pressurized aeration stops the moist air from getting in. The floor and wall tiles in the entire building from the Villeroy&Boch system are complemented with stainless steel floor fillets. Part A contains a swimming hall with a 25 m pool, a tob...
