A BOUYGUES CONSTRUCTION COMPANY

Shared innovation

The construction of a new branch in Morava will see Mercedes-Benz customers benefit from an increased capacity and accessibility of sales and service facilities in the region.

This project was completed using the Design & Build approach, resulting in a multi-purpose building that includes a service workshop, spare parts warehouse, offices and driver's facilities.

The truck centre features parking spaces for vehicles and a sales area, with soft landscaping to complement the new build. The project has been designed with the possibility of future expansion of the service facilities in mind.

In numbers

50 000

m² of land for development

2 720

m² of floor area

13 309

m² of paved area
